Markup Import and Markup Assist are similar in functionality, but Markup Assist is different in that it can be used with no drawing object selected. (Import feedback into drawings, either active or inactive, is the primary use for Markup Assist.) Draw a rectangle that is 2 inches long and 1 inch wide on the page. You can also draw lines on the page at any angle, and also draw text boxes or annotations, such as arrows or circles. Draw lines in the shape of the container you are importing to, such as one half of a shallow plastic container or a wooden box, using the AutoCAD command SHIFT+drag. Continue working on the drawing. Use the command TAB to switch from the shape-picking screen to the feedback screen, which will prompt you to import feedback for any changes to the shape you've just drawn. When you are done importing, use the command TAB again, this time to return to the shape-picking screen. Once you've imported a drawing, you will be able to see a dot to the right of the shape you just imported, to the right of the Shape Name column. You can click on this dot to open the Markup Import screen, which has several options. Simply importing a drawing is the most common use of Markup Assist, but it can be used with the following additional features: You can import arbitrary drawings for review. The Import Incomplete Drawing option will copy all objects in the incomplete drawing to the import target. The Import All Objects option will copy all objects in the incomplete drawing to the import target. You can leave a drawing with unsaved changes in place, while importing the shape to use as a template. You can use the Type Match option to make sure that only objects with the same type as the selected shape are imported. You can use the Ignore Custom Annotations option to import a drawing with custom annotations without affecting your own custom annotations. You can use the Ignore Hierarchy option to import a drawing without loading any of the models in the drawing. You can use the Ignore Unlocked Hierarchy option to import a drawing without loading any of the models in the drawing. You can use the Import Linked option to import a drawing as though it was linked to your current drawing, even if the two are separated by
