Digital Typefaces is a freeware by Slebessi. This font is free for personal or commercial use. Digital Typefaces makes it easy to change the appearance of your email messages, articles and other documents. All you need is a standard word processor and a bit of know how about typography. Digital Typefaces 7 Description Digital Typefaces 7 (DTF7) is a free digital typeface designed for use with Black/White/Opaque (B/W/O) documents. It is meant to fit the widely used standard publishing software and is designed to conform to the ADA guidelines as well as to industry standard requirements. Digital Typefaces 7 is a True Type outline font designed to change the regular aspect

of your digital documents. You can use it within email messages, articles and other documents that you need to publish. The font features interesting shapes which are bound to stand out when personalizing a paragraph or headline. Digital Typefaces 7 contains special font characters, e.g. subscripts, superscripts, bold/italic figures, ligatures etc. and also supports multilingual texts. The style includes: Euler is a free Unicode/ True Type outline font designed to be used for scholarly publications. Euler features an interesting geometrical design and is designed to come to life with pictures and graphics. If you are searching for a font that stands out in the eyes of the reader or if you have a need for a high quality font for publication use, Euler can be just the right fit. Euler uses a different approach to traditional serif fonts. Euler features a bolder and more weighty design as compared to other serifs. They look great in a large print setting or a highly graphical environment. However, Euler can be used with applications that require a more traditional and

delicate appearance as well. Euler is a free Unicode/ True Type outline font designed to be used for scholarly publications. Very simple to use Thick font with narrow margins Updated version of Digital 7 Size: 12pt (Postscript only) Availability: Digital 7 is available as a Font, not an additional Font. Documentation is available for download, no need to purchase. We have just released the Beta for Dask - the open-

source zero-footprint EDA CAD tool with a completely new visual interface. You can download the installer now from the Dask website: It will be offered to everyone in the next week, so get in early! The Beta release is a preview and will contain many new features (including a truly native UI!), and while the final version is available now, it is still in Beta, so please download and help us get the final version out. We would love to hear your feedback. Please send your comments and bug reports to dask@users.sf.net and csd@users.sf.net. Please test Dask extensively and give us your feedback. How to Install: Please follow these instructions. Once installed, Dask can be started from the system tray. If you wish, you can pin Dask to the system tray. Achievov.org is pleased to announce the release of Shiba, a new font, designed and drawn by our artist, Philip Kuipers. The typeface features a wide range of characters, including katakana, kanji, Hiragana, and arabic characters, to name but a few, together with diacritics and a distinctive extended narrow glyphs

set. The font is available for licensing for commercial and non-commercial use. The latest release of the graphical FontForge editor has just been released. It has been under development for over one year, with the release of FontForge 1.3 in 2005. This release includes many improvements, and the most important is the font designer interface which now allows you to select the font files from within the editor window. So you can now design your font files within the editor window as you do your font data. New in FontForge 1.3 The fontkore.net site now has a new program, FontMaker, designed to create TrueType fonts. This program is similar to the FontLab program, but there are some important differences, and

Digital 7 is a true type font with only 37 glyphs. It has been designed to emphasize and enhance the value of the text and headline, thanks to the special shape of its characters. It supports Japanese, English, and various European languages, including Russian and Ukrainian. The font makes it ideal for personalization of all kinds of documents, including newsletters, articles, brochures, leaflets, invitations, posters, books, and other digital documents. It is also suitable for the production of fonts that differ from the standard design, for instance, in letter-spacing and emphasis. Digital 7 was developed by Stancellio, an innovative Greek company that was established in 1994. Stancellio specializes in the development of applications for the design, printing, and publishing sectors. Its headquarters are located in Athens, Greece. The text above was
